

INTERNSHIP EXPERIENCE SUMMARY REPORT

This is a comprehensive overview of my experience, daily tasks, and accomplishments during my internship at Pixel8 which started on July 23, 2024, and ended on September 12, 2024. I had the opportunity to work across both the frontend and backend development units, gaining a well-rounded experience in web application development. My primary focus on the frontend involved using Vue.js and Quasar to create dynamic, responsive user interfaces. Leveraging Vue.js's powerful features like computed properties and state management, I ensured that users could interact smoothly with the application, especially when handling complex tasks.

One of the key projects I worked on was building a task management system. I developed the interface using Quasar's components, such as q-expansion-item and q-card, ensuring that tasks were displayed in an organized, interactive manner.

On the backend, I was tasked with developing and maintaining RESTful APIs using PHP. I implemented various CRUD operations to manage tasks and user data, ensuring seamless communication between the frontend and the server. My work involved writing clean, efficient API endpoints that handled different HTTP requests like GET, POST, PUT, and DELETE. This backend experience helped me strengthen my understanding of server-side programming and database interactions, particularly with MySQL.

To ensure the quality of the APIs, I performed extensive testing using Insomnia, which allowed me to manually test and debug API responses. I also automated API testing with Codeception, writing tests to validate both successful and failure cases. This experience deepened my understanding of API reliability and testing best practices.

Throughout the internship, I encountered several challenges, such as managing frontend state across multiple components and preventing duplicate form submissions. By implementing Vuex for centralized state management, I was able to resolve these issues effectively. These problem-solving experiences taught me how to approach and overcome technical obstacles in a real-world development environment.

Overall, my internship at Pixel8 provided me with valuable hands-on experience in both frontend and backend development. I learned how to collaborate with teams, handle complex tasks, and deliver functional, user-friendly applications. Working with modern technologies like Vue.js, Quasar, PHP, and Codeception equipped me with the skills and knowledge to build scalable, efficient web applications. This experience has been instrumental in advancing my technical abilities and shaping my approach to software development.
