PROVIDENT FUND AND LOANING SYSTEM WITH SMS NOTIFICATION FOR CALAMBA WATER DISTRICT

Researchers: Wendy V. Gerona, Aira Jane D. Cruz, and Crissy Lei C. Canillas

Adviser: Ms. Rose Ann C. Malaborbor

The study aimed to create, design, and develop a provident fund and loan system for Calamba Water District. The developed system can automatically and accurately compute the provident fund and loans of employees, disseminate information of the said fund and loans through SMS notification, and generate reports. Visual Studio 2010 as programming language and MS Access as database were used in developing the system. The researchers conducted survey, interview, and observation in Calamba Water District. Based on the results of the evaluation, majority of respondents strongly agreed that the system would greatly help the company in managing the employees' shares and loans.

FAMS: WEB-BASED MONITORING SYSTEM WITH 2D MAPPING FOR CALAMBA CITY AGRICULTURAL SERVICES DEPARTMENT

Researchers: Jadiel Aimi D. Manabat, Kevin Brian B. Paris, and Karen U. Ramirez

Adviser: Ms. Rose Ann C. Malaborbor

The researchers designed and developed a web-based farm monitoring system with 2D Mapping for Calamba City Agricultural Services Department to provide them an automated system that can improve their current ways in managing their records and reports. The researchers used the Iterative Waterfall Model and PHP with CodeIgniter. They likewise used the descriptive research to identify the appropriate solution to the problem. Interview and survey were conducted to obtain the needed data.

Findings revealed that the Calamba City Agricultural Services Department strongly agreed that the developed system was acceptable in terms of its functionality, usability, and accuracy. The system was found to be a huge help for the technicians in managing the information and creating their reports. The use of the 2D mapping has helped them to easily view the agricultural profile of Calamba City.

WEB-BASED DOCUMENT MANAGEMENT AND INFORMATION DISSEMINATION THROUGH EMAIL AND SMS NOTIFICATION WITH MEMBERS ATTENDANCE MONITORING SYSTEM FOR LCFEA

Researchers: Josef Aser V. Gonzales, Jocelyn G. Llanderal, and Jackie Lou T. Perez

Adviser: Engr. Ricrey E. Marquez

This study aimed to design and develop a web-based document

COMPUTER STUDIES AND TECHNOLOGY

management and information dissemination through Email and SMS Notification with Members Attendance Monitoring System for the Letran Calamba Faculty and Employees Association (LCFEA). It intended to help the client in managing the documents, facilitating information dissemination, and monitoring attendance of members and officers.

The researchers used the Iterative Life Cycle Model in developing the proposed system. The study found out that the proposed system was acceptable to the respondents based on its usability, reliability, security, and maintainability. The researchers thus recommended the implementation of the system for LCFEA.

WEB BASED SYLLABI MANAGEMENT SYSTEM OF COLEGIO DE SAN JUAN DE LETRAN CALAMBA

Researchers: Rose Shane Gil I. Lopez, Adrian M. Rayco and, John Mark Angelo C. Roxas

Adviser: Ms. Rose Ann C. Malaborbor

This descriptive research aimed to improve the syllabi management of each department in Colegio de San Juan de Letran Calamba. The researchers administered a pre-assessment survey among the faculty members of the School of Computer Studies and Technology Faculty members to identify the current process of syllabi management and identify the problems encountered.

The researchers concluded that the system can be implemented to other departments because the respondents were satisfied in using the system. The system can lessen the work of the faculty. It is more accessible and reliable because it can be accessed online; hence, the faculty can be assured that their submitted syllabi are sent to the intended persons.

Recommendations were made regarding its implementation in the different departments of the Colegio. In addition, improvement on the notification features must be given attention to assist the deans in uploading the XML file for the distribution of course loads.

MY REVIEWER: "AN ANDROID APPLICATION FOR EXAM REVIEWER"

Researchers: Hernan Estimada Jr., Jorge Teodor Cabral, and Nathaniel Pantilanan

Adviser: Prof. Roselle R. Bengco

This research aimed to provide students an efficient way of reviewing their lessons. The study involved 18 students and 2 experts from the SCST department of the Colegio. On a five-point Likert's scale, the respondents evaluated the reliability, functionality, portability, and features of the assessment module.

Results indicated that there were different ways of learning suitable
